THE ULTIMATE LIST OF CLIMATE CHANGE AFFAIRS

By Eva Fernández

As all of us know Climate Changes it's not something new, but maybe it's going to be our new reality.

The thing is that, there are three main themes about Climate Change that shine over the others. Those are Global Warming, environmental pollution and the obtainance of resources.

The problem with **global warming** starts in our incapability of make good and effective policies that will be able to confront Climate Change not only in the paper but acting as it should.

In many countries are building so many policies to show citizens how they are "taking care" of our environment and our future. But, what many people doesn't know is that many of those countries already has policies that should already acted and, some how, they don't. So, governments prefer to create new ones, in order to look like they are the better ones in the manage of the problem.

The **environmental pollution** is an other of our biggest problems on Climate Change. As we all know, the contamination of seas and oceans, earth, air and all our ecosystems it's putting in danger, not just our lives but all kind of lives in our world.

The Earth is an enormous ecosystem that needs each of its pieces to work properly. But, we are the only ones that can make a real change to save our home and our future, if we want to have one.

Because of that, all those problems and its consequences are connected in a complex system, and the use of **finite resources** will let us in a very hard situation where will be almost impossible to find drinking water, to produce food, or in general, live as we were doing until today.

So, we will do any thing or we will just stay with a popcorn bowl watching how we destroy our own children's future?

WAYS TO "RURR"

By Tsvetelina Ivanova

As nowadays the topics for greener world arise with full power, new generations are waking up with new creative ideas for not only reducing the garbage recycling what is possible, reusing and upcycling. As we all know that recycling started decades ago as the green problem with environment pollution arise and keep being one of the most important topics that not only the scientists are worried about, but also the population.

At the start of one of those green movements before entering the great ideas generated in the everyday live. The start of recycling was almost four decades ago, in the USA, when a compact paper wanted to have symbol used to communicate the product content which is recycled, and to propose it to customers and the competition was won by Gan Anderson, which entry was the nowadays accepted symbol of recycling (a shape with only one side, and no end).

What is very interesting to be understood is that the concept standing behind of RURR is very simple: people interest and motivation to be involved, so together to make change for better and cleaner plastic.

"RECYCLE, UPCYCLE, REDUCE, REUSE"

Let's look at "RURR"

• Recycle

There are many things that can be made of recycled materials. The way to recycle is the Government support, people want and will and factories.

• Upcycle

Think before going to place the items at the bin (hopefully for recycling) can you modify some of them. In Internet people invented tons of ways for creative ideas for upcycling – to modify the products, either for decoration or other uses. You can do great things with kitchens things, clothes, linens and other stuff in the households or out, even jewelries. Just think of it and use your imagination!

• Reduce

The modern society is the so-called consummators – which leads to devastating effect to the mother Earth. So, it is not only suggested but it is necessary to reduce consumption of certain resources, especially those that are not renewable.

• Reuse

Plenty of things can be used more than one more time, though from those which cannot be used again for the same purpose, they can be modified to serve other purposes.

Think and check in the Internet for many creative ideas!!!

THE IMPORTANCE OF

ENVIRONMENTAL EDUCATION

By Filio orgianeli

Environmental education is a procedure that allows peoples to learn about environmental issues, engage in problem solving, and take action to improve it. Consequently, individuals is aware of environmental issues and have the skills to make responsible decisions.

The first global intergovernmental conference on environmental education adopted the Tbilisi Declaration in 1978 and ended up in three goals for environmental education:

- To strengthen clear awareness of, and concern about, economic, social, political and ecological interdependence in urban and rural areas.
- To give every person opportunities to acquire the knowledge, values, attitudes and skills needed to protect and improve the environment.
- To create new standards of behavior of individuals, groups and society towards the environment.

It is positive that environmental education seems to exist in recent years. Fridays For Future is a movement of young people that began in August 2018, after 15-year-old Greta Thunberg and other young activists sat in front of the Swedish parliament every schoolday for three weeks, to put pressure on government to take action on the climate change. Every Friday students from all over the world drop out of class to protest.

It is necessary people can make informed decisions that consider future generations. So, if we do not teach young people how to protect the environment, how will the planet keep alive? How will we live compatibly with nature?

2030- CHANGES AND STRATEGIES FOR GOING GREEN

By Iva Ravlić

The EU's biodiversity strategy for 2030 is a long-term plan to protect nature and reverse the degradation of ecosystems. The strategy contains specific actions and commitments for recovery of Europe's biodiversity. It will also support a green recovery following the Covid-19 pandemic.

The strategy aims to challenge important issues such as:
the impacts of climate change
forest fires
food insecurity
disease outbreaks - including by protecting wildlife and fighting illegal wildlife trade.

ACTIONS

- Establishing a larger EU-wide network of protected areas on land and at sea
- Launching an EU nature restoration plan
- Introducing measures to enable the necessary transformative change
- Introducing measures to tackle the global biodiversity challenge

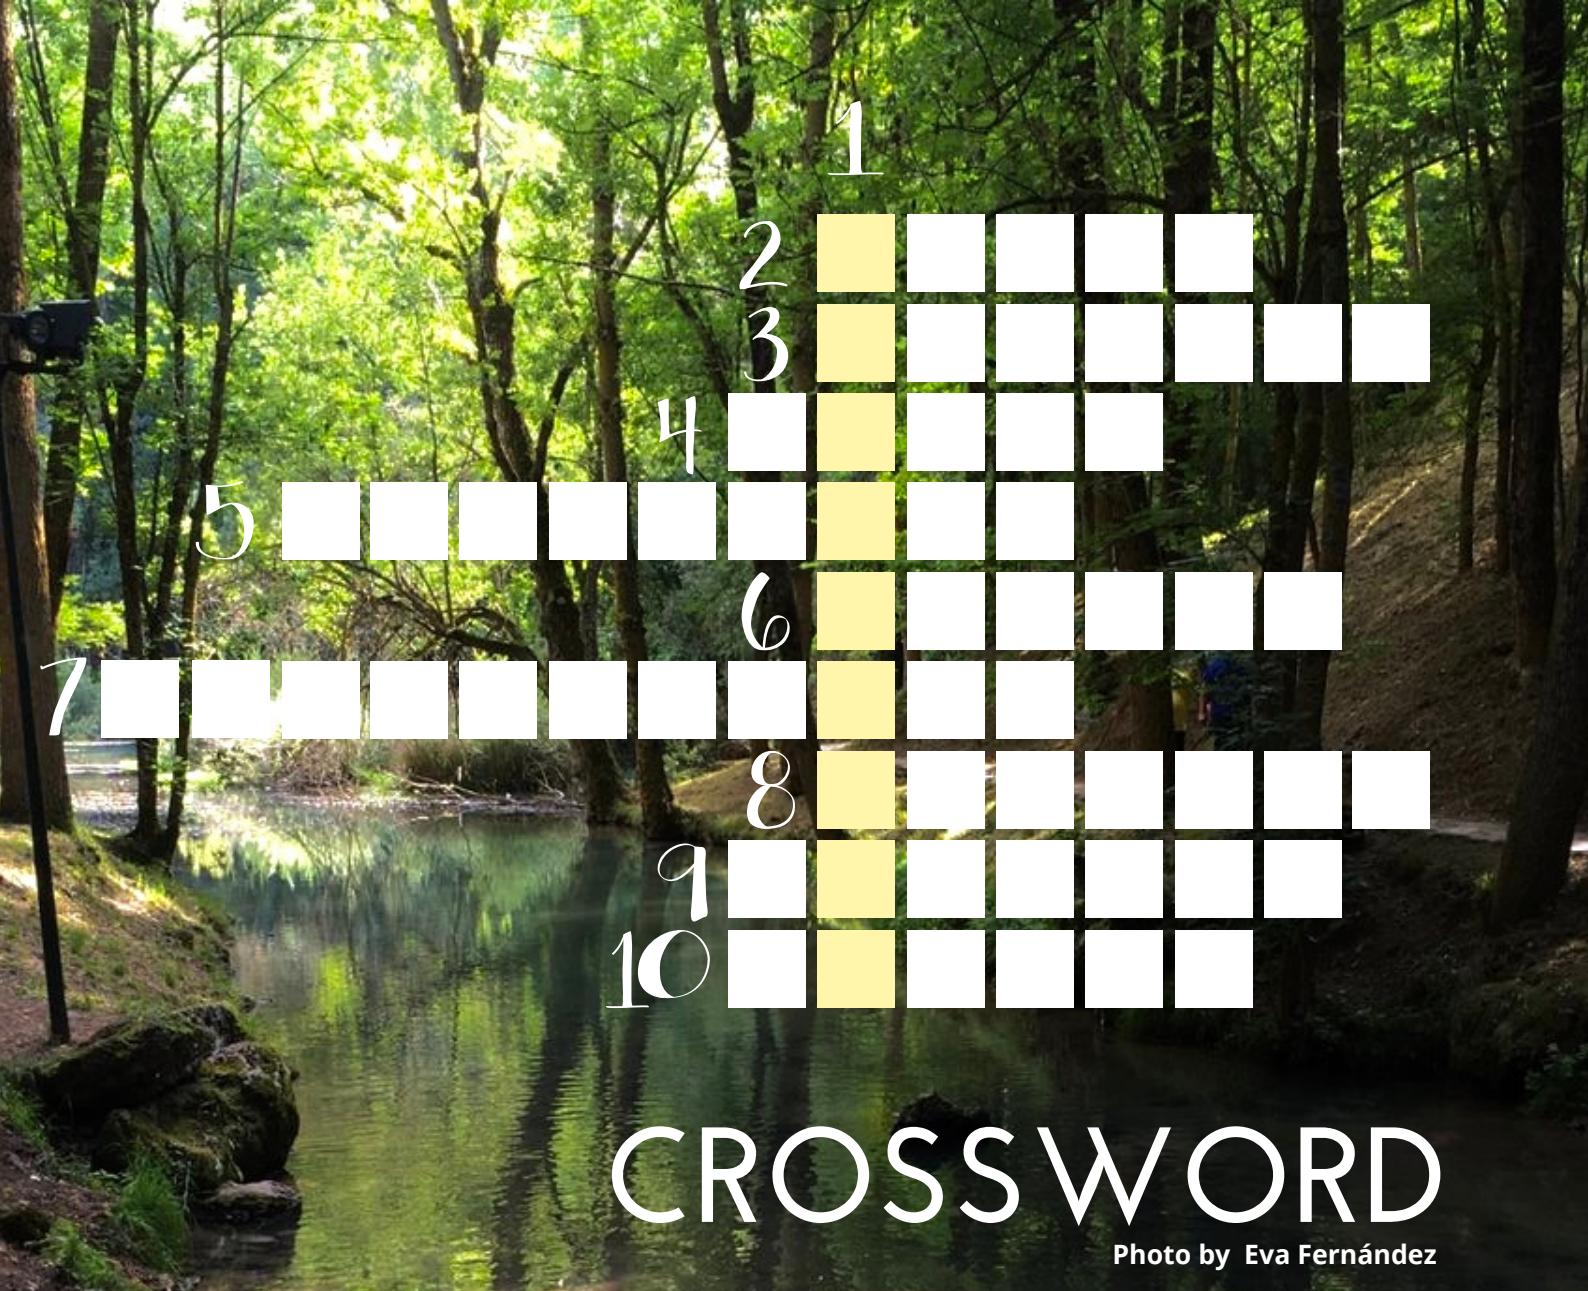

PREVIOUS AND UPCOMING ACTIONS

- January 2020- Launch of public consultation on nature restoration targets
- May 2020- Publication of the EU biodiversity strategy for 2030

Co-funded by the
Erasmus+ Programme
of the European Union
